

THE OPERATOR'S GUIDE

Tara Park, Reem Island

The Investor's Case · Modon · Reem Island · Abu Dhabi

The capital is climbing. Reem Island is where it earns. And this is the building I chose with my own money.

What follows is the full case: the numbers, the contract, the protections, the exit. Nothing softened, nothing skipped. Every figure comes from a signed contract, an official release, or is marked indicatively.

August 2026 · @uaecalum · +971 55 350 2699

Why Reem, Why Now

Abu Dhabi is the earlier-cycle market. While Dubai spent 2026 correcting, the capital's residential values rose around 18% year-on-year, and Reem Island apartments matched it. This is a market still climbing the curve Dubai already climbed.

FROM A TARA PARK BALCONY RENDER: MARYAH'S SKYLINE: THE TENANT BASE, ACROSS THE WATER

What Reem actually is

Reem is Abu Dhabi's density-and-yield engine: a freehold residential island facing Al Maryah's financial district, with schools, malls, hospitals and the tenant base already in place, not promised. Rental demand comes from people who work ten minutes away, and it is accelerating: while leasing cooled across most of the emirate this year, Reem's leasing activity more than doubled.

One more thing most brochures never mention: Reem Island now sits inside the ADGM financial free zone. The same English common law jurisdiction that governs Abu Dhabi's international financial centre governs this address. For a foreign investor, that is not a detail. That is the moat.

The investor logic in one line: buy the capital's momentum, at pre-handover pricing, in the district its workforce already rents in.

Market figures indicative, drawn from published 2026 research; verify current releases before committing.

Modon

Modon is an Abu Dhabi government-backed master developer: the group behind Hudayriyat Island's transformation and a growing Reem Island portfolio. For an investor, the ownership structure is the point:

- **Sovereign-adjacent balance sheet.** This is not a leveraged private developer racing its lenders.
- **Land it doesn't need to flip.** Master-developer economics reward completing districts, not exiting them.
- **Delivery incentive.** Modon's flagship projects are the emirate's own showcase, reputational stakes run above any single tower.

I did my developer diligence the only way that counts: I signed their contract myself, paid their milestones, and read every clause. Chapter 07 shows you what's in it.

Tara Park

A residential development on Reem Island by Modon, anchored on park frontage, with apartments designed for the island's end-user and rental market, with handover anticipated 2030.

LOCATION	Reem Island, Abu Dhabi
DEVELOPER	Modon
ANTICIPATED HANDOVER	Anticipated 2030
RESIDENCES	Family-scale two- and three-bedroom apartments with deep balconies
AMENITIES	Resort outdoor pool + indoor pool, park frontage, gym & running track, co-working lounge, kids' club, social spaces, hotel-grade lobby

What It Costs, From Someone Who Paid It

I bought a two-bedroom here in May 2026: 121 sqm, high floor, **₪2,386,000**. That is around **₪1,830** per square foot. Today, comparable two-beds are releasing at around **₪2.8M**.

₪2.386M

MY ENTRY • MAY 2026

~₪2.8M

CURRENT 2-BED PRICING,
INDICATIVELY

~+17%

MOVEMENT IN MONTHS,
INDICATIVELY

Read that movement honestly

Early-release pricing to current-release pricing is partly market growth, partly the developer's own escalation curve. Every off-plan project prices later phases higher. The question isn't whether **₪2.8M** is more than I paid. It's whether **₪2.8M** still stands below where Reem is heading. Chapter 08 runs that maths at half the market's recent pace, deliberately conservative.

THE TWO-BEDROOM PLAN: THE LAYOUT I BOUGHT

Context: ready Reem stock and the wider AD market rose ~18% in the last year. Tara Park's current pricing buys a 2030 building at 2026-adjacent numbers. The gap between those two dates is the trade.

40 / 60: Capital-Light By Design

On a D2.8M unit, the structure works like this:

STAGE	AMOUNT	TIMING
8 × 5% construction milestones	D1,120,000 total (D140,000 each)	Spread across construction, final milestone ~early 2030
Handover payment, 60%	D1,680,000	On handover, anticipated 2030

What that means for capital

Roughly D1.12M deployed in stages over ~3–4 years controls a D2.8M asset through its growth phase. The 60% balance is due only when you hold keys, and can be mortgaged at handover, subject to bank approval at the time.

Plan for this now: the contract lets the developer bring handover forward on 30 days' notice. Treat the 60% as money you could need earlier than 2030, not later.

ADGM Escrow: Where Your Money Actually Sits

Every milestone payment goes into a dedicated project escrow account, not the developer's operating account. The framework:

- **ADGM-governed.** Abu Dhabi Global Market: an international financial centre running direct English common law, with its own independent courts. Reem Island itself falls within ADGM jurisdiction, so the framework that protects global capital on Al Maryah protects this building too.
- **English text prevails.** If translations ever diverge, the English contract controls. You can read every word that binds you.
- **Milestone-linked release.** Funds release against construction progress: the build advances or the money waits.

Most investor decks never show this page, because most agents have never read an SPA cover to cover. I've read this one twice: once as your broker, once as a buyer wiring his own milestones into the same account.

Escrow account: project-designated under the Tara / Al Reem Island escrow arrangement per the SPA.

Read This Before You Sign Anything

These clauses are in the contract. I'm telling you because I signed it myself.

ACCELERATION

The developer may accelerate the payment schedule. Milestones can arrive faster than the calendar suggests.

EARLY HANDOVER

Handover can be brought forward with 30 days' notice, and the 60% with it. Keep that capital reachable.

RESALE GATE

No resale until 20% is paid, plus developer NOC and an admin fee. Your money is illiquid in the early phase. Price that in.

LATE PAYMENT

1% per month on overdue amounts. Autopay the milestones; this penalty compounds quietly.

TERMINATION

Walk away and you forfeit the higher of 10% or the developer's actual loss. Off-plan is a commitment, not an option.

None of these clauses are unusual for UAE off-plan, but “usual” and “understood” are different things. An investor who prices these in cannot be surprised by them.

The Numbers That Matter

Entry D2.8M • ~D1.12M deployed pre-handover (40%) • handover anticipated 2030. Abu Dhabi's recent pace: ~18%/yr. Both scenarios below, and I treat half-pace as the base case.

SCENARIO	VALUE AT HANDOVER	GAIN ON PRICE (ROI)	GAIN ON CAPITAL DEPLOYED (ROE)
Full pace (~18%/yr continues)	~D5.0M	~+80%	~+195%
Half pace (~9%/yr), base case	~D3.8M	~+36%	~+88%
Flat market	D2.8M	0%	0%. You own a new Reem 2-bed at today's price

ROE = gain measured against the ~40% actually paid before handover. Full pace assumes the recent run-rate simply continues. An aggressive assumption, which is why half-pace is my working number.

Then the yield takes over

WHAT THE TENANT IS PAYING FOR

All figures indicative and illustrative; capital at risk; past pace no guarantee of future movement. Not financial advice.

The Exit, Priced Honestly

The main play: sell just before handover, only 40% in. You've paid ~\$1.12M of a \$2.8M unit. The building is finished, the risk is gone, and the buyer who wants keys pays for that certainty. At half pace that's roughly \$1M of gain on \$1.12M deployed, without ever funding the 60%. Requires 20%+ paid, developer NOC and an admin fee; budget both.

Exit 2: hold and rent at handover. Fund or mortgage the 60%, lease into Reem's working tenant base at indicative 6–6.5% gross. The natural route for income investors: the tenant is already across the water.

Exit 3: hold long. Honest note: apartments are a yield play, not a scarcity play. Supply keeps coming to Reem. This asset earns through rent and cycle timing, not decade-long scarcity.

TARA PARK AT NIGHT: THE FINISHED ASSET A PRE-HANDOVER BUYER IS PAYING FOR

What Can Go Wrong

- **Timeline.** 2030 is anticipated, not promised. Construction slips happen; your capital's clock runs on the developer's calendar, in either direction, given the acceleration clause.
- **Supply.** Abu Dhabi's pipeline is growing fast. More Reem towers land before 2030; yields and resale pricing will be set against that competition.
- **Rates.** If you plan to mortgage the 60%, you're exposed to whatever rates are in 2030. Nobody knows them today. Stress-test your handover plan at higher-than-current rates.
- **Liquidity.** Until 20% is paid, you cannot exit at all. After that, only with NOC and fees. Early-phase money is locked money.
- **Market.** Abu Dhabi is climbing now; markets that climb also pause. The flat-case row on the returns page is not decoration, make sure you're content owning the asset in that world.

If any of these five made you flinch, that's the page doing its job. I'd rather lose a sale than place an investor who hasn't priced the downside, not least because I share it.

THE POSITION

Skin In The Game

I don't just sell Tara Park. I pay the same milestones you would, into the same ADGM escrow, on a high floor of the same building. Every clause in this document binds me first.

Message me and say you'd like the Tara Park conversation.
