

Cresswell Views • Unit 107 - Where Every Pound Went

Purchase price £1,580,000 • Christopher Cummings • Obligations fixed in dirhams; £ costs move with the exchange rate

You agreed at the year's 5.08 peak; the rate then slid - as low as 4.85 through spring and summer - before recovering to 4.98 today. Later payments bought fewer dirhams per pound than the day the deal was struck. That, not any added fee, is the whole story - and today's 4.98 is the best rate since February.

Why "£90K" became "£94K": the full schedule to this point is £463,200 - at the agreed-at rate of 5.078 that was **£91,217**, the **"£90K" we spoke about**. Paying across the year at real-world rates - including exchange margins and card/cash conversion costs, which the "Extra cost" column captures all-in - brings it to **~£94,050**. Nothing was added by the developer; ~£2,800 is the combined cost of the pound weakening after January plus the cost of converting money. Your running total of £83,053.23 is exactly right; **a top-up of roughly £10,900-11,200 clears this instalment.**
