

The Ladder - The Clean Version

The maths from the video · £100K to £3.2M · the Instagram version, labelled honestly

◆ The Engine - One Line of Maths

A £1,000,000 home on a 50/50 payment plan: you fund **£500,000** while it's built. Four years later at handover it's worth £1.5M - the house grew 50%, **but you only funded half, so YOUR money doubled**. Sell, take the million, buy two. Repeat.

◆ Five Rungs, Twenty Years

£100K IN

NO NEW MONEY AFTER DAY ONE

The clean assumption: 50% ROI on the property every rung - which the 50/50 payment plan turns into 100% ROE on your cash. On time, every time. That never happens - which is what the next page is for. (ROI = the property's growth; ROE = YOUR money's growth - the payment plan is the difference.) All figures indicative.

The Reality Version

Same ladder, real market - a delay, a dud, a dip and a star inside it

◆ The Five Rungs As They Actually Land

RUNG	WHAT THE PLAN SAID	WHAT ACTUALLY HAPPENS	RESULT
1	+50% in 4 years	Behaves. You feel like a genius.	+50%
2	+50% in 4 years	Handover a year late, grows 30. Welcome to off-plan.	+30%, +1 yr
3	2 units, +50% each	One does 40. One is a DUD - flat, four years for nothing. The rung where everyone quits.	+40% / 0%
4	+50%	A launch pick comes off big - one unit does EIGHTY. The portfolio catches up in one cycle.	★ +80%
5	Sell at year 20	Market's soft at handover - you hold two extra years instead of panic-selling, then sell.	hold +2 yrs
Landing - same destination, uglier road			~£16M, ~23 yrs

◆ The Same Ladder, Drawn Honestly

The honest conclusion: the ladder doesn't need every rung perfect - it needs you to not get off. Planned properly, the realistic ladder still multiplies money life-changingly; it just does it on the market's clock, not Instagram's.

Compressing 20 Years Into 10

Same engine, honest assumptions - the video runs at 100% ROE per cycle; the plan runs at 50% ROE

◆ The Levers

- 1. More cash at the start** - the single biggest compressor: every rung you skip is 3-4 years saved.
- 2. Lower payment plans (40/60)** - fund 40% instead of 50% and the same market growth returns meaningfully more on your cash. Leverage does the work, not optimism. Timing note: 40/60s are around RIGHT NOW because Abu Dhabi is pushing hard for market share and Dubai developers are competing back - plans this favourable might not always be on the table.
- 3. Faster cycles (~3-3.5 years)** - launch-to-assignment flips rather than always holding to handover.
- 4. Plan at 50% ROE per cycle, never more** - anything the market gives above 50% on your cash is upside, not plan.
- 5. Bigger projects as cash grows** - the ladder doesn't stay sixteen D1M units; it becomes fewer, larger positions with the same discipline.

Three ways to run it, next page - capital-led, build-as-you-go, and patient. All three run at 50% ROE per cycle; they differ only in what you start with and what you add. Your calculator has every box editable - break it yourself, then pick your version.

The honesty rail: pushing cycles shorter than ~3 years, or planning above 50% ROE per cycle, makes the plan measurably less likely to hold. The ladder's power is repeatability, not heroics - a plan you can survive a dud rung inside beats a faster plan you can't.

White & Co · UAE Off-Plan & Investment · Running this exact plan with my own money - unit one is bought
+971 55 350 2699 · @dubaicalum

◆ A - Capital-Led · start £950K, add nothing · £3.2M ~year 10

CYCLE	YEARS	CASH IN	GROWTH (50%)	CASH OUT
1	0-3.5	£950,000	£475,000	£1,425,000
2	3.5-7	£1,425,000	£712,500	£2,137,500
3	7-10.5	£2,137,500	£1,068,750	£3,206,250

£1.43M £2.14M £3.21M

yr 3.5 yr 7 yr 10.5

How it works: the £950K goes across four or five payment plans at once - deposits and early instalments covered from day one, one portfolio flip per cycle. From rung two the positions get bigger, not more numerous.

◆ B - Build As You Go · start £400K, add £100K a year · ~£3M by year 10.5

CYCLE	YEARS	CASH IN	GROWTH (50%)	TOP-UPS IN CYCLE	CASH OUT
1	0-3.5	£400,000	£200,000	£350,000	£950,000
2	3.5-7	£950,000	£475,000	£350,000	£1,775,000
3	7-10.5	£1,775,000	£887,500	£350,000	£3,012,500

£950K £1.78M £3.01M

yr 3.5 yr 7 yr 10.5

The key mechanic: the £100K a year is never parked waiting for the next rung - it lands straight into LIVE payment plans as it arrives. Each year's top-up either covers the next instalments on units you already hold (freeing ladder cash to open another unit) or opens a fresh unit mid-cycle itself. Every pound is at work from the month it exists - that is what maximising cash-at-work means in practice.

◆ C - Patient · start £400K, add nothing · ~£3M around year 17-18

£600K	£900K	£1.35M	£2.03M	£3.04M
yr 3.5	yr 7	yr 10.5	yr 14	yr 17.5

The clever version if the annual cash is better used elsewhere: same engine, zero pressure, five unhurried cycles. The trade is time.
