

The Income Plan

£1.5-2 million net rental income a year, by 2036 - built from what you already own

THE GOAL

£1.5-2M

net per year, low leverage

THE DEADLINE

2036

age 57 · 10 years

BASE NEEDED

£19-25M

property at ~8% blended net

STARTING POINT

2 units

+ UK capital to come

◆ The Yield Model - Why £19-25M

The book ends as a mix: roughly two-thirds **Airbnb in strategic locations at ~10% net**, the rest **long-term lets at ~5% net** - blended **~8% net** - and every number in this deck is AFTER service charges (~£10K/yr townhouses and villas, £15-20K/yr apartments). At 8%, £2M a year needs ~£25M of property; £1.5M needs ~£19M. That number is the whole plan. Nobody saves their way to £25M in 10 years - the gap is closed by **payment-plan flips front-loaded in the early years**, then converted into income units. Page 2 is the engine, page 4 is what it costs you.

◆ What You Already Own - And the Play for Each

UNIT	BOUGHT	PRICE	PLAN	HANDOVER	THE PLAY
Terra Gardens 1-bed Expo Living · ~2,100/sqft	Oct 2025	£1.64M	80/20	Q4 2029	KEEP. Airbnb from Q1 2030 - Expo is exactly where 10% net works. ~£192K/yr at handover after the ~£15K service charge, growing with the market.
Athlon 1-bed · 1,000 sqft Aldar · 1,823/sqft	Oct 2025	£1.823M	60/40	Q4 2029	SELL at handover. At ~6%/yr the exit is ~£2.17M; settle the 40%, release ~£1.4M cash into the next rung, Decision gate 2029 - if the market is soft we rent it instead, never a forced sale.

Athlon release = sale price less 40% balance (£729K) less 2% selling cost. You said it yourself - values there are already punchy, so the exit is a gate we walk through only if 2029 prices justify it.

The honest version up front: this plan does not work on rental yield alone, and it does not work on flips alone. Yield is the destination, flips are the vehicle, and your UK capital is the fuel - the only real decision is how fast you put fuel in. That is page 4.

Flips First, Yield Second

Payment plans mean your cash rides the whole unit's growth - that is how the pot gets built

◆ One Flip Cycle, In Numbers

Unit price (off-plan, Abu Dhabi)	₹2,000,000
Your cash in by exit (~35% paid)	₹740,000
Value after 3 yrs at 6%/yr - full unit grows	₹2,382,000
Profit after 2% selling cost	₹334,000
Cash back • return on YOUR money	₹1,034,000 • ~49%

The unit grew 19%. Your cash grew ~49% - because you only funded a third of it. Same ROI-vs-ROE maths as the Ladder deck, run on a 3-year cycle.

◆ The Flip Rules

- 1. Front-loaded.** Flips run 2026-2033, heaviest early. Every dirham in 2026 rides two to three cycles; a 2033 dirham rides none.
- 2. Never more than half the book.** The keepers are the plan; flips are the accelerant.
- 3. Hard stop 2032-33.** No new flips inside the final three years - we are never forced sellers near the finish line.
- 4. Only flip what we would happily hold.** If a flip will not sell, it becomes a rental, not a fire sale. Every pick has to pass that test first.

◆ Why Abu Dhabi for the Flips

ENTRY, DAY ONE	COST
Hudayriyat-type: 5% down + 2% ADM	~7%
Dubai typical: 10% down + 4% DLD	up to ~14%

Half the entry cost and 2% cheaper fees per cycle. When you are recycling the same pot three times, that 2% saved per turn is real money. 40/60-style plans are around right now because Abu Dhabi is pushing hard for market share - they will not always be this favourable.

◆ Purchase 3 - End of 2026, ₹4M

Shortlist: Hudayriyat • Jebel Ali Springs • Taraf on ADGM

Criteria: softest pre-handover plan (40/60-style), handover 2030 or earlier, short-let friendly.

This one is a **keeper**: ~₹1.68M deployed pre-handover (40% + 2% ADM), the 60% handover balance mortgaged - the one mortgage in the plan - and Airbnb from 2030 at ~₹495K/yr after service charge, gross of the mortgage.

The trade-off, said plainly: flips need a buyer at the right moment. That is why the rules above exist, why Athlon is a gate not a promise, and why the keepers - not the flips - are what actually hit your target.

~49% ROE PER CYCLE

3-YEAR TURNS

AD ENTRY ~7%

HARD STOP 2032-33

Ten Years, Rung by Rung

Base case - Option A funding • 6%/yr from 2027 • Airbnb 10% / long-let 5% net

WHEN	MOVE	CASH EVENT	INCOME RUN-RATE
End 2026	Buy P3 keeper (€4M, Hudayriyat-type) + Flip 1 (€2M). Instalments begin.	~€670K deployed	-
2027	Add Flip 2 (€2M). Instalments across all three.	~€915K/yr	-
Q4 2029	Harvest year: Athlon sold (~€1.4M back) • Flip 1 exits (~€1.03M back) • Terra handed over.	+€2.4M in	-
2030	Terra Airbnb live • P3 handed over, mortgaged, Airbnb live • Flip 2 exits (+€1.03M) • buy P4 ready unit (€4M, Airbnb) • start Flip 3.	~€4.4M deployed	€527K
2031-32	Three incomes running (Terra, P3, P4). Rents accumulate in the pot.	-	€0.98-1.05M
2033	Flip 3 exits (+€1.03M in). Pot sits at ~€4.1M ready for the next rung.	-	€1.12M
2034	Buy P5 (€4M, long-let) early in the year - service charges make 2033 itself too tight.	~€4.2M deployed	€1.39M
2035	Buy P6 (€2M, long-let) from surplus rents. Knocking on the band at €1.49M.	~€2.1M deployed	€1.49M
2036	P3 mortgage cleared from the pot. Five income units, ~€22.7M book. €1.5M crossed.	debt free	€1.68M
2037-38	First unlevered years. €2M crossed 2038.	-	€1.96M → €2.08M

◆ Net Income Staircase (€ per year)

◆ Your Cash Position, Year by Year (€ '000 • Option A)

	2026	2027	2028	2029	2030	2033	2036
New cash in from you	2,500	500	500	500	-	-	-
Money back (flips + Athlon)	-	-	-	2,433	1,034	1,034	-
Net rents that year	-	-	-	-	527	1,124	1,683
Deployed into property	667	915	915	667	4,407	247	2,400*
Cash pot at year end	1,833	1,420	1,007	3,273	428	4,122	49

*2036 deployment = clearing the P3 mortgage principal (2033's €4.1M pot buys P5 early in 2034). The 2026-28 pot is not parked by preference - it is cover for instalments already signed: ~€2.5M falls due 2027-29 against €500K/yr coming in. If you would rather hold it in the UK until called, the £500K can arrive in stages as payments fall due - same plan. Alongside all this, your remaining Terra and Athlon instalments (~€2.0M through 2029, est. on ~20% paid) are committed spend from when you bought them - outside the £800K of new money. Band reached 2035-36, €2M crossed 2038, debt-free from 2036. All figures indicative.

What We Buy, Why, and With Whose Money

Seven moves after the two you already own - each with its job, its cash, and its funding source

◆ P3 · Keeper · £4M · end 2026

Hudayriyat / Jebel Ali Springs / Taraf ADGM. **The anchor income asset.**

Cash: £1.68M (40% + 2% ADM), spread 2026-29.

Funded by: your £500K + yearly top-ups.

Plan: handover 2030, Airbnb ~£495K/yr after service charge. The 60% balance is the mortgage question - box below.

◆ P4 · Keeper · £4M · 2030 · ready

Cash: £4.16M all cash (price + 4% DLD).

Funded by: Athlon exit (£1.4M) + F2 exit (£1.03M) + pot.

Plan: bought READY - Airbnb income ~£409K net within a year. By 2030 the goal is income, not more waiting.

◆ F1 · Flip · £2M · end 2026

Cash: ~£740K spread 2026-28.

Funded by: your £500K.

Plan: sell pre-handover 2029 → **£1.03M back** (~49% on your cash). Pot builder #1.

◆ P5 · Keeper · £4M · early 2034 · ready

Cash: £4.16M all cash.

Funded by: the 2033 harvest - F3 exit + three years of accumulated rents (~£4.1M pot).

Plan: long-let ~£202K/yr net from 2034. Bought early-year rather than squeezing into 2033.

◆ F2 · Flip · £2M · 2027

Cash: ~£740K spread 2027-29.

Funded by: yearly top-ups.

Plan: exit 2030 → **£1.03M back**, staggered a year behind F1 so the exits never queue.

◆ P6 · Keeper · £2M · 2035 · ready

Cash: £2.08M all cash.

Funded by: surplus rents alone.

Plan: long-let ~£91K/yr net from 2036. The rung that proves the machine now feeds itself.

◆ F3 · Flip · £2M · 2030

Cash: ~£740K spread 2030-32.

Funded by: rents - no new money from you.

Plan: exit 2033 → **£1.03M back**. The LAST flip - hard stop after this.

◆ The Mortgage Question

With ONE mortgage (P3's 60% handover balance, £2.4M, rent-covered, principal cleared 2036): **£1.68M by 2036, £2M crossed 2038.**

With NO mortgage at all (60% paid in cash at handover; P4 waits to ~2033, P5 to ~2036): **~£1.55-1.6M by 2036, £2M around 2040.**

The mortgage buys roughly two years at the top of the band. **Both routes hit £1.5M+ by 2036** - it is a preference, not a necessity. Toggle it in the calculator (Y/N box) and watch the years move.

Three Ways to Fund It

Same target, three cash schedules - sequencing beats totals. A 2026 dirham rides three flip cycles; a 2033 dirham rides none.

RECOMMENDED

◆ Option A - Front-Loaded · £800K total

£500K now, then £100K/yr for 3 years

£2.5M working from day one: P3 keeper + two flips immediately. Three full flip cycles fit before the hard stop. ~£1.8M cash buffer all the way through.

£1.68M by 2036

Band reached 2035-36 · £2M crossed 2038 - least total cash, best outcome

◆ Option B - Staged · £900K total

£300K now, then £200K/yr for 3 years

Same ladder, same rungs - but the day-one buffer drops from ~£1.8M to ~£0.8M. It funds on paper; there is simply no slack. One soft exit (Athlon or a flip) pushes a rung back a year.

~£1.6-1.7M by 2036

£100K more in, for a thinner margin - only pick this if the UK sales genuinely stage this way

◆ Option C - Drip · £1M total

£100K/yr for 10 years

Most total cash, worst compounding. The calculator shows it plainly: the pot goes red in year one. The honest C is a smaller keeper (~£3M) and delayed flips - the early cycles that do the heavy lifting get starved.

~£1.2-1.4M by 2036

£2M lands ~2041 - misses the stated goal on the stated clock

My recommendation: A if the UK sales support it - it is the least money for the best outcome, purely because of when it arrives. B is the realistic middle if the cash comes staged. C I will build for you if you want it, but I would be lying if I called it a 10-year plan - it is a 13-year plan wearing a 10-year badge. **And these are not rigid: a blend of the three, shaped around when your money actually lands, works fine** - the calculator takes any cash-in pattern you give it.

All three are switchable in the calculator (scenario box) - change the cash-in numbers and watch the funding row. GBP at ~5.0 AED throughout.

What Can Go Wrong, and What We Do About It

A plan you can only believe if it tells you where it breaks

RISK	WHAT IT DOES	THE ANSWER BUILT IN
Flat market longer than expected	Flip returns shrink; you said yourself 2026 looks flat at the 1,6-1,700/sqft floor	2026 is modelled at 0% growth already. Every extra flat year pushes the plan ~1 year right - it bends, it does not break, because the keepers still rent.
A flip will not sell	Cash stuck at the wrong moment	Every flip is a unit we would hold - it becomes a rental, and the next purchase waits. Rule 4.
Athlon soft in 2029	~D1.4M arrives late or not at all	Decision gate, not a promise. Rented instead: ~D90-100K/yr and P4 shrinks or waits a year.
Airbnb yields disappoint	10% net is the top of the market, not the middle	Blended model already assumes only ~2/3 of the book Airbnbs. At a harsher 8% blended-to-6.5%, 2036 income is ~D1.3M - band missed by a year or two, not by a mile. It is a live cell in the calculator, as are the service charges now baked into every number.
The mortgage	Leverage you did not want	One mortgage, on P3's handover balance only, rent-covered from day one, principal cleared 2036 from the pot. Or run with none - it costs roughly two years at the top of the band, and D1.5M+ still lands by 2036-37. Never a second one without your say-so.

◆ What Happens Next

- 1. Pick the funding option** - A, B, or C sets everything else.
- 2. Confirm the UK sale timing** - the plan is built around when that cash can actually land.
- 3. Tell me the paid-in position on Terra and Athlon** - instalment schedules to handover, so the committed side is exact, not estimated.
- 4. P3 shortlist by November** - I bring you Hudayriyat / Jebel Ali Springs / Taraf ADGM options with payment plans side by side, we pick one, we move before year-end.
- 5. The calculator is yours** - every assumption on this deck is an editable cell. Change it, argue with it, break it. That is what it is for.

You asked where you need to be. The answer: ~D22-23M of property by 2036, built from your two units, one keeper a year from now, three flip cycles, and £800K of UK capital placed early rather than £1M placed slowly. The market sets the pace - the plan just makes sure every dirham is working while we wait.

Where this document sits: these are general thoughts, built on stated assumptions - a starting place, not a final plan. Next step is a proper sit-down to narrow it to exactly what you want, what you can comfortably commit, and which real units fill the P3-P6 slots. Then the calculator becomes YOUR plan rather than my model of it.

All figures indicative until documents confirm. Appreciation, yields and exit prices are assumptions, not commitments. E&OE.
